EXCEL DATA ANALYTICS PROJECT

Blinkit Sales Analysis

Executive KPI Dashboard & Channel Optimization

Shivam Raut

Tools: Microsoft Excel · Pivot Tables · Dynamic Slicers

EXECUTIVE SUMMARY

Identify the items, outlets and locations driving sales

Sales by item, outlet and location

Compare sales by item type, fat content, outlet size and location tier to see where sales come from.

Clear priorities for stores and items

Find which items and store types to focus on to grow sales and volume.

Key objective: turn raw sales records into an interactive Excel dashboard that supports business decisions.

Item

Outlet

Location

DATA OVERVIEW

8,523 item records underpin the analysis

DOMAIN	FIELDS	PURPOSE
Item	Item Type, Fat Content, Item Weight	Product range, diet type and package size
Commercial	Item Visibility, Item Sales, Rating	Shelf share, customer satisfaction and revenue
Outlet	Size, Outlet Type, Establishment Year	Store size, store format and sales by outlet age
Geography	Outlet Location Tier	Tier 1 big cities to Tier 3 smaller towns

The structured dataset has 8,523 records and 13 attributes, loaded as an Excel Table for pivots and slicers.

DATA CLEANING

Standardizing fat-content labels reconciled the pivots

BEFORE

5 inconsistent labels

Low Fat, low fat, LF, Regular and reg split the pivot totals.

AFTER

2 clean categories

Find & Replace (match entire cell contents) gave Low Fat and Regular.

After refreshing all pivots and charts, totals reconcile to about $1.2M. The dashboard uses 10 pivot tables, slicers, GETPIVOTDATA KPIs and 8 charts.

KPI SCORECARD

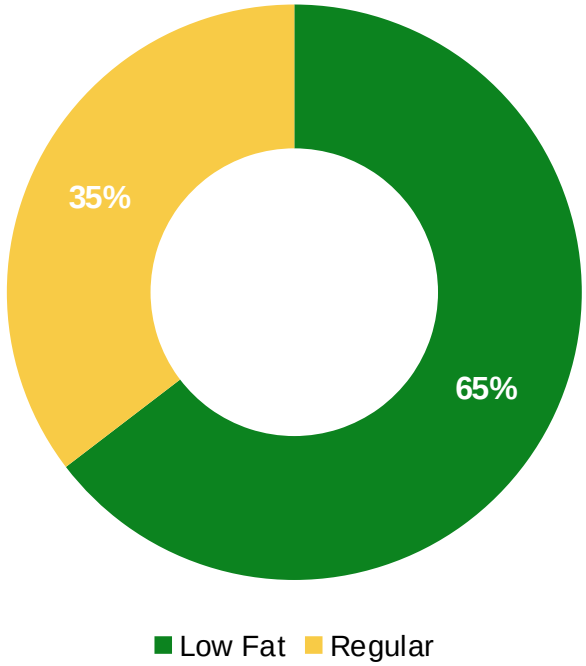

The dataset records approximately $1.2M in sales

TOTAL SALES	AVG SALES PER ITEM	TOTAL ITEMS	AVG RATING
$1.20M	$141	8,523	3.97
Revenue across all items	Average per item record	Item records analyzed	Out of 5.0

Average sales per item are steady at about $141, and customers rate items 3.97 out of 5.

PRODUCT MIX

Low Fat items drive 65% of sales

LOW FAT

$776K (65%)

Makes up most sales.

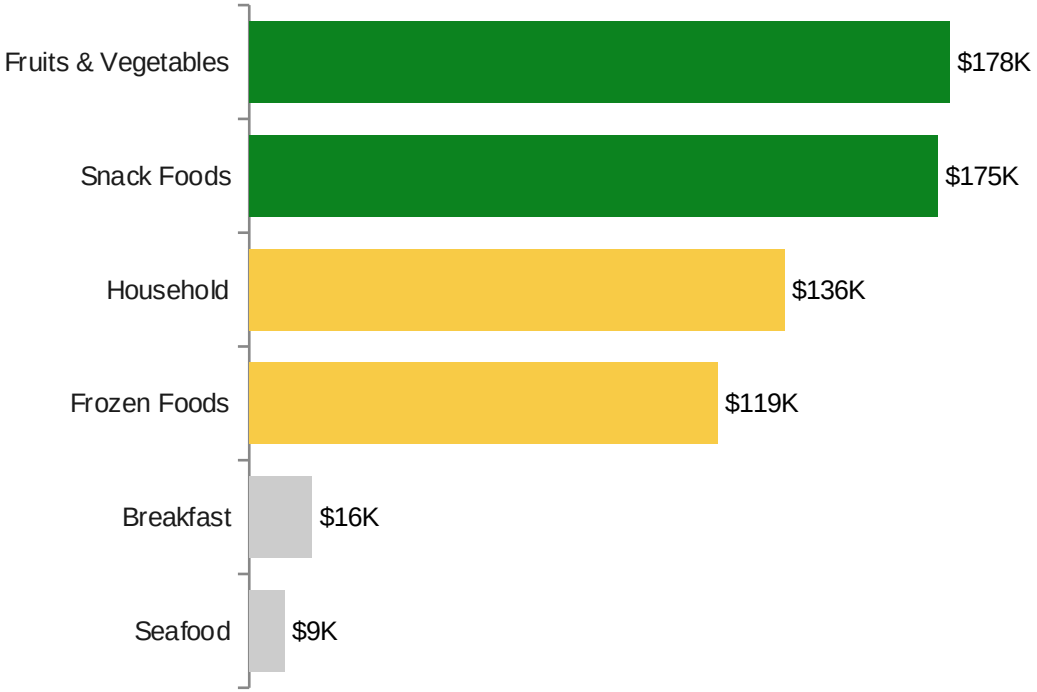

REGULAR

$425K (35%)

The remaining 35% of sales.

ITEM CATEGORIES

Fruits & Vegetables and Snack Foods lead item sales

TOP TWO

~29%

$178K + $175K

HOUSEHOLD + FROZEN

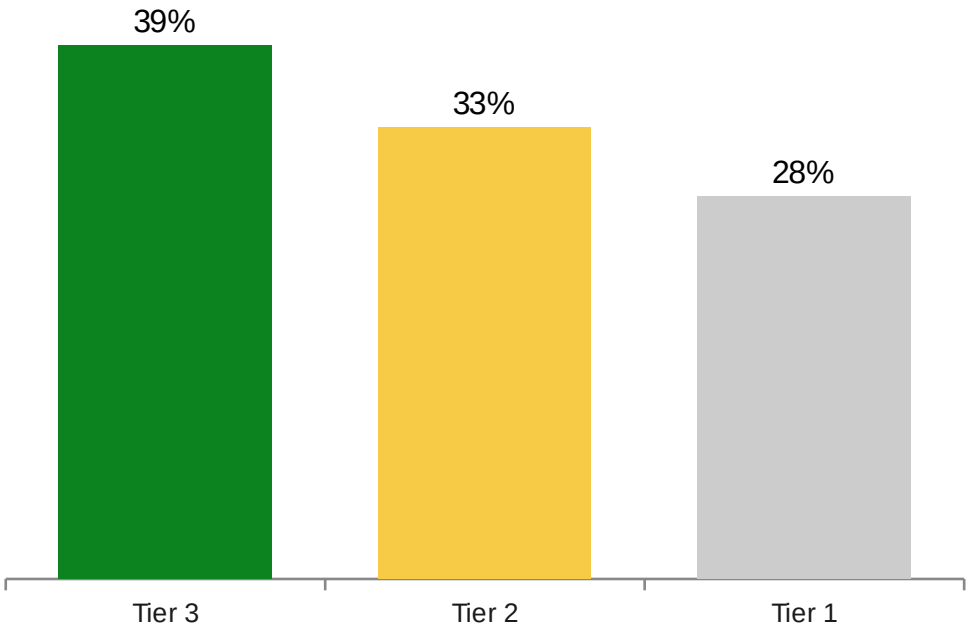

$255K

$136K + $119K

Breakfast ($16K) and Seafood ($9K) are worth investigating.

LOCATION TIERS

Tier 3 locations generate the most sales, at 39%

TIER 3

$472K (39%)

Largest share of sales.

TIER 2 AND TIER 1

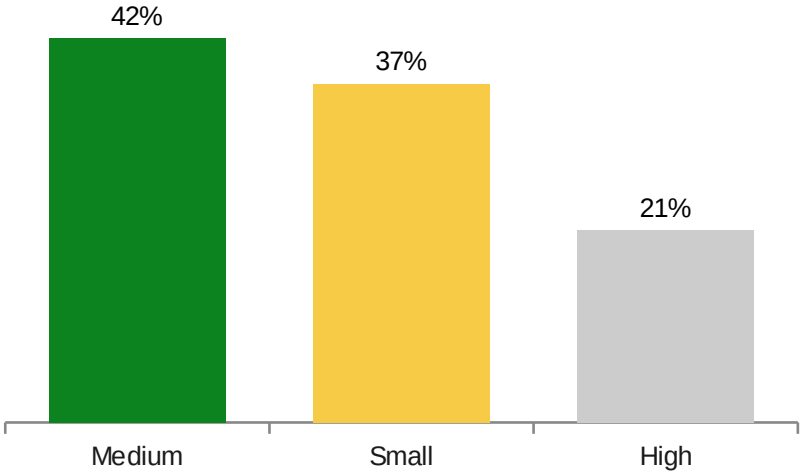

$393K · $336K

33% and 28% of sales.

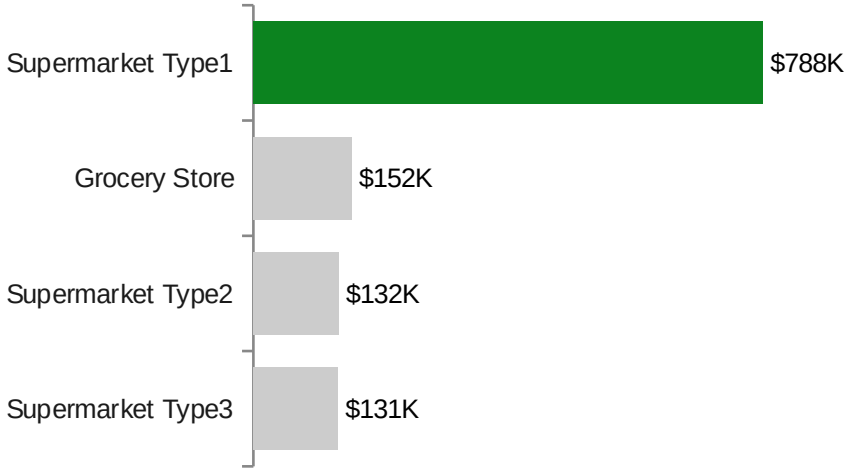

OUTLET SIZE & TYPE

Medium outlets lead by size; Type1 leads on volume

Sales share by outlet size (%)

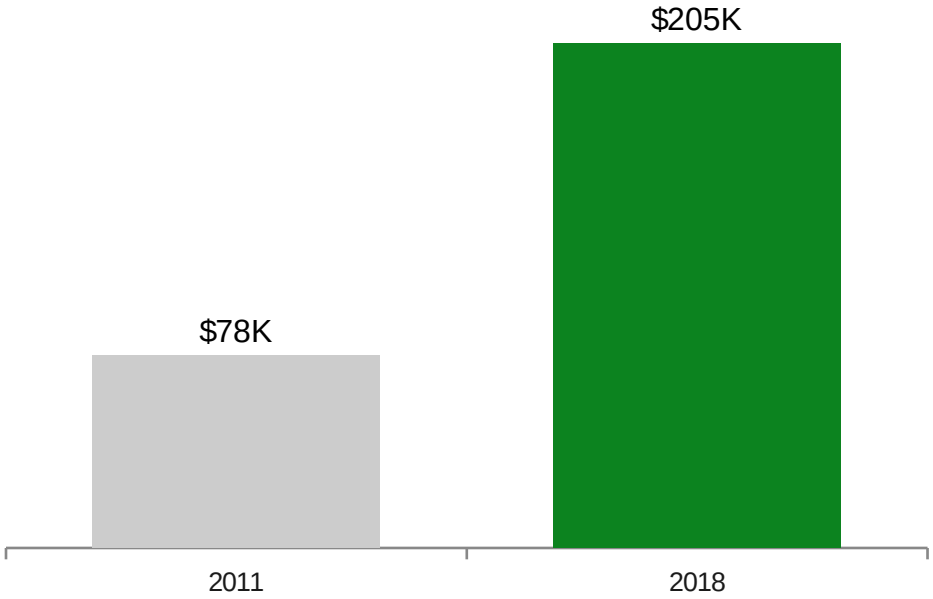

Sales by outlet type ($K)

Type1 makes up about 65% of sales with 5,577 items, but average sales per item are nearly the same ($140–$142) across all outlet types.

OUTLET AGE

Outlets established in 2018 have the highest sales

HIGHEST

2018: $205K

Highest sales by establishment year.

LOWEST

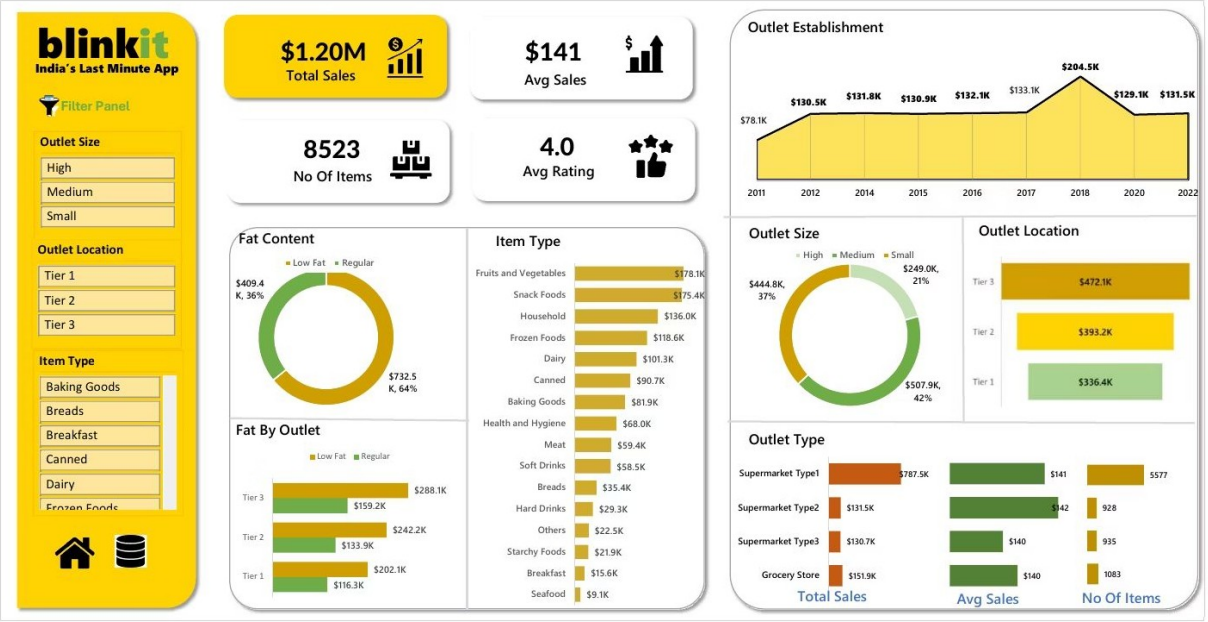

2011: $78K

Lowest sales by establishment year.

DASHBOARD

Interactive Excel Dashboard

10 pivot tables, 8 charts, KPI cards and slicers to filter by outlet size, location tier and item type.

RECOMMENDATIONS

Where to focus next

1 Expand stock in top categories and Tier 3 locations

2 Investigate why Seafood and Breakfast underperform

3 Focus on value per item, not just volume

4 Review older outlets

CONCLUSION

Key takeaways

KEY TAKEAWAYS

- Low Fat items drive 65% of sales
- Tier 3 leads location sales at 39%
- Type1 leads on volume, not value per item
